DETAILED ACTION

Reason for Allowance

1. The following is an examiner's statement of reasons for allowance: In response to the Office action dated August 25, 2006, and further to the amendments filed on November 2, 2006, applicant's request in view of the amendments/remarks have been reviewed and respectfully considered.

In the last Office action claims 1 through 11 have been rejected, and claims 12 through 30 have been objected to as having allowable subject matter. Applicant's arguments in view of the amended independent claims 1, 2, 7 and 8 are believe to be persuasive and are allowed for the reasons stated below.

With respect to claim 1, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. Specifically, Vosper et al. do not teach or disclose wherein the area light source includes features, which scatter light from the LED device to provide substantially uniform illumination by each of the red, green, and blue- LED chips over an area that includes at least one frame of the light-transmission original, as amended in claim 1.

Voser et al., instead, illuminate a portion of the document (strip, of banknote 2), even if an area of the banknote is illuminated, the light is not transmitted through the bank note nor is an area that includes the entire banknote illuminated substantially uniformly over an area that includes at least one light transmission original.

Art Unit: 2625

Furthermore, although Voser et al. discloses that the source arrays include red, green and blue LEDs (Column 5, lines 43-67), Voser et al. do not disclose or suggest that red, green and blue LEDs are activated sequentially.

Nagata et al. (A secondary reference), further do not disclose or suggest that an area light source provides substantially uniform illumination over an area that includes at least one frame of the light transmission original, as recited by claim 1. Nagata et al., instead, illuminate only a portion of a light-reflecting original which is sensed by a linear image sensor.

Therefore, claim 1 is Allowed, because Voser et al. and Nagata et al. either alone or in combination do not disclose all of the features of claim 1, claim 1 is not subject to rejection under 35 U.S.C. 103(a) as being unpatentable over Voser et al. in view of Nagata et al.

As per independent claims 2, 7 and 8, although not identical to claim 1, include features similar to claim 1, that are neither disclosed nor suggested by the cited art. Namely, an area light source for radiating light to a light-transmission original where the area light source includes features which scatter light from the LED device to provide substantially uniform illumination by each of the red-, green-, and blue- LED chips over an area that includes at least one frame of the light-transmission original.

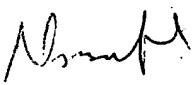

As discussed above, Voser et al. and Nagata et al., either alone or in combination, do not disclose these features. Accordingly, claims 1, 2, 7, 8 and all dependent claims, which depend there from are also allowed.
